

Security Policy

Effective: May 15, 2026 | Review: Annually | Owner: Revolution Group

We are required to remind you annually of the importance of maintaining the security and confidentiality of our company's applications and data as well as the information that belongs to our customers and vendors. The viability of our business and all businesses depends on the protection of information.

- ▶ **Confidentiality**

All information accessed, whether actual data or knowledge of process and procedure, is confidential and must be protected. This includes our company, customer, and vendor data as well as knowledge about business processes and procedures.

- ▶ **Single Sign On (SSO)**

All company applications and data must be accessed via Single Sign On (SSO) where available. You will only need to log in once to access all our SSO-supported applications.

- ▶ **Multi-Factor Authentication**

In addition to SSO, we require the use of multi-factor authentication. You will need to provide additional verification, such as a code sent to your phone, to access our applications.

- ▶ **Unique Passwords**

All passwords must be unique for every application and stored in a password manager such as LastPass. All passwords must comply with the current complexity policy.

- ▶ **Personal Devices**

If company data is accessed with a personal device (such as a mobile phone) the company may remotely erase the company data or all device data, if necessary, in the event of a security problem such as loss of the device.

- ▶ **Anti-Virus and Anti-Malware Software**

Any computer used to access company or customer information systems must be configured with anti-virus and anti-malware software that is kept up to date.

- ▶ **Loss or Theft of Equipment**

If you lose control of any object (laptop, phone, briefcase, documents, etc.) that potentially has company or customer data, contact your manager immediately — they will notify the Security Team.

- ▶ **Ransomware**

If you receive a suspicious email attachment, link, or pop-up demanding payment, do not click, open, or pay. Disconnect from the network immediately and contact your manager or the Security Team. Time matters — a fast report limits damage.

▸ **Annual Security Training**

You must attend security training at least once per calendar year. Training is offered quarterly for your convenience.

▸ **Monthly Security Training**

You must complete the security training sessions assigned to you each month.

▸ **Annual Policy Acknowledgement**

You must read and sign the current security policy annually at the beginning of the calendar year.

▸ **Disciplinary Action**

Failure to adhere to the Security Policy may result in disciplinary action, including possible termination.

Reporting a Security or Confidentiality Breach

If you suspect or detect a security or confidentiality breach, contact your manager or the Revolution Group Director of Technology Services immediately.
