

Alpine Springs Recovery

Sales Discovery Brief | Revolution Group | Prepared May 18, 2026

Executive Overview

Company

Alpine Springs Recovery is an addiction and substance abuse treatment center in rural Western Pennsylvania (Linesville, Greenville, Farrell). Operations run 24/7/365 with no weekends or holidays off. CEO Doug Datish recently relocated to Columbus (Upper Arlington) and works fully remote. He also owns a separate medical billing and practice management company serving mental health and addiction centers — a vertical he is deliberately growing.

Size and Footprint

Users	34 (24/7 shift-based; most devices are shared)
Endpoints	12 laptops with docking stations
Mobile	4 iPads managed via Apple Business Manager (2 client-facing, 2 clinical)
Phones	RingCentral VoIP / Yealink handsets
Cameras	40 wired cameras to DVR bank, uploaded to cloud
Servers	On-prem server bank present but unused; all workloads are cloud-based
Microsoft 365	Active; varying license tiers across users
MFA	Microsoft Authenticator enforced
Internet	Fiber (Brightspeed) arriving in next few months; current connection unreliable with no viable backup

Current IT Situation

A self-taught IT person named Derek has managed everything for roughly four years: infrastructure, an internal operational web app (alpsprings.work), digital marketing, and the public website. He is the sole point of failure and has accumulated excessive administrative rights across every system. Datish has been quietly peeling back access. Derek's personality has created ongoing employee conflict and legal liability exposure. Datish is planning to lay him off imminently through a restructuring.

Security Posture — Confirmed Gaps

- **Confirmed breach: a login from Austin, TX sent 865 fraudulent DocuSign emails from a company account. Derek did not auto-lock the account — Datish found out via external phone calls. This is the lead proof point.**
- Security logs are being captured but going to an unknown destination with no clear visibility or automated response.
- No backup internet (cell coverage poor; Starlink unreliable in rural PA).
- Employees caught accessing inappropriate content on company systems — monitoring inconsistent.
- Derek suspected of unauthorized email access; Datish is running an internal investigation.

Compliance and Risk Profile

Alpine Springs is CARC certified and subject to state and federal cybersecurity covenants tied to their licensing and government funding. They house sensitive PHI/PII for addiction recovery patients and are audited annually on both financial and operational compliance. Datish is sophisticated about audit requirements and values process discipline. Vendor insurance documentation (COI and cyber liability) will be required before engagement.

Identified Needs

1. Full Managed IT Services (Full Outsource)

- No internal IT person to retain. Derek is out. Revolution Group becomes the IT department.
- 24/7 support coverage is critical given the round-the-clock operational model.
- Dedicated Account Manager for monthly check-ins with COO (Datish operates fully remote).

2. Managed Security / SOC with Auto-Response

- The Austin/DocuSign incident is the anchor story: auto-lockdown on anomalous logins is exactly what failed and exactly what we deliver.
- Ongoing security posture assessment and compliance alignment throughout the year.
- Endpoint security software deployed on all 12 managed laptops.

3. Transition Day — On-Site Support (High Priority)

■ Send a technician on-site the day Derek is terminated.

- Credential collection, admin access revocation, kill-switch audit, system documentation.
- Datish is genuinely concerned about retaliatory action. Treat this as a high-risk cutover.
- Cleveland-area technician is the right resource given proximity to the PA sites.

4. Microsoft 365 License Audit and Optimization

- Datish suspects he is overpaying and may have licenses he does not need or understand.
- High-interest item. Frame as a cost-savings discovery exercise, not an upsell.

5. Procurement Services

- They cycle through laptops regularly due to staff handling.
- Zero-touch deployment resonated strongly: drop-ship to any PA site, device auto-configures on first login. Position as a convenience and cost savings feature.

6. Access Control Referral (New Building Build-Out)

- Datish mentioned a new service line build-out requiring a key card/access control system. We do not provide this directly but should offer a referral. Including this signals trusted advisor, not just vendor.

Flags and Next Steps

■ Derek still has full admin access to all systems right now.

- Consider a brief call before the proposal is sent to advise Datish on quietly auditing admin access lists, or simply position this as a Day 1 priority in the proposal.

- Datish is trust-driven. He was referred by Ryan Miller to Matt. Reinforce the referral chain and service consistency.
- Vendor documentation required: COI + cyber liability certificate (we carry \$2M cyber liability) and SOC 1 and 2 certification.
- He will ship equipment rather than require on-site for routine hardware. On-site reserved for emergencies or major projects.
- He is cost-sensitive but responds to waste elimination framing, not price shopping.
